

REPLACING THE WOLF LOOM FOLD KNOB

- 1.** Check to see that the metal nut is visible at the bottom of the slot in the side of the castle. On some older Wolf looms, it is possible that the metal nut has slipped below where you can see it. Pry up the metal nut with a small screw driver inserted into the slot.
- 2.** Make sure the cylindrical part of the plastic t-nut slide is in the slot.
- 3.** Put the black fold knob through the rear fold support bar, front fold support bar, and the plastic t-nut slide, then screw it into metal nut.
